

MUHAMMAD SOHAIL

Full-Stack Developer (MERN / Next.js)

Karachi, Pakistan | 0311-0297772 | msohailg211@gmail.com | [LinkedIn](#) | [GitHub](#)

SUMMARY

Full-Stack Developer (4th Semester BSCS) specializing in the MERN stack and Next.js, with experience building production-style applications using REST APIs, JWT authentication, MongoDB, PostgreSQL, and modern frontend technologies. Comfortable with software architecture patterns like MVC and state machines, clean code practices, and payment integrations. Passionate about building performant web applications and continuously learning modern technologies.

TECHNICAL SKILLS

- Languages: JavaScript, TypeScript, C++, SQL
- Frontend: React.js, Next.js 14+, Tailwind CSS v4, Framer Motion, Vite
- Backend: Node.js, Express.js, MVC Architecture, REST APIs, Middleware, JWT Authentication & Authorization, State Machine Pattern
- Databases: MongoDB & Mongoose, PostgreSQL & Prisma, SQL
- Payments & Integrations: Stripe (payment integration & webhook handling)
- Tools & Deployment: Git/GitHub, Postman, Vercel, Netlify

PROJECTS

DineStream — Restaurant POS System

React 18, Vite, Tailwind CSS v4, PostgreSQL, Prisma ORM, JWT

- Built a full-stack restaurant point-of-sale system with order management, billing, and role-based access.
- Designed a relational database schema in PostgreSQL using Prisma ORM for orders, menu items, and staff roles.
- Implemented JWT-based authentication and a responsive frontend across multiple feature phases.

Event Booking & Ticket Management System (Stub) — Backend

Node.js, Express.js, MongoDB, Mongoose, JWT, Stripe

- Building the backend for a peer-to-peer event ticket resale marketplace, with JWT authentication and full CRUD for events, listings, and orders.
- Designed a state machine pattern to manage order transitions reliably across the ticket resale lifecycle.
- Integrated Stripe for payments, including webhook handling for real-time order and payment status updates.

NexusHR — HR Management Dashboard

React.js, Vite, Context API, React Router v6

- Developed a full HR dashboard with employee CRUD operations using a clean, atomic folder structure.
- Built reusable custom hooks (useEmployees, useEmployeeForm) to manage state and form logic efficiently.
- Implemented client-side routing and global state management without external state libraries.

CERTIFICATIONS

- NexusBerry MERN Stack Development Program
- Diploma in Information Technology (DIT)

ACHIEVEMENTS

- Built 2 full-stack production-style applications (NexusHR, DineStream POS) and a backend ticketing system with Stripe integration
- Strong understanding of MVC architecture, JWT authentication, and state machine design patterns
- Comfortable with Git workflows, including subtree-based multi-project repository management
